Hi all,

with this topic I would like to share screenshots about **installation process** and the first look at **JingOS**.

Tips: if you have Windows 10 installed, remember to disable Fast Boot in order to easily install JingOS, see [How to disable Fast Startup \(Fast Boot\) on Windows OS devices to dual boot JingOS 268](#).

First of all, in the first boot of JingOS a lockscreen will appear, remember the default **PIN is 123456**:

1 Lock Screen1920×1080 126 KB

The welcome screen is the second step:

Hello JingOS

Starting now

2 Welcome1920×1080 48.2 KB

The system will ask you an Internet connection, in my example I used a VM so wired connection is the only option available:

Select WLAN

Back

Next

3 Connection1920×1080 28.9 KB

User must read and accept terms:

Welcome to JingOS

User experience means a lot to Jingling. In order to help our developers to improve the user experience of JingOS, we may collect some of your non-personally-identifiable information during your installation of and first login to JingOS, such as the Mac Address of your hardware, your device type, etc. For further details, please see the Notice to Users – Information Collection.

☒ I have read and agree to the above terms

I disagree

I agree to the above terms

4 Terms1920×1080 165 KB

The first boot of JingOS ends:

Congratulations!

Welcome to JingOS!

Get started

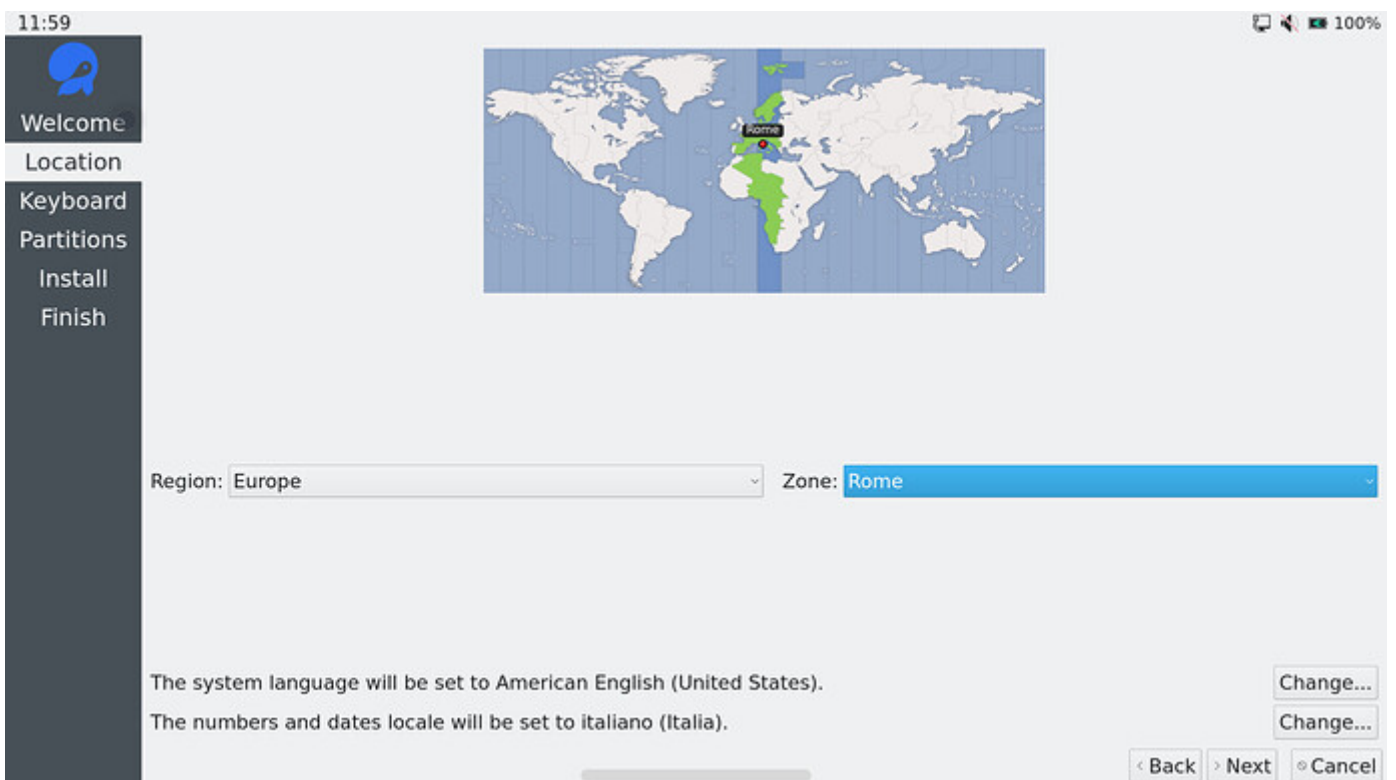

5 Welcome close1920×1080 132 KB

So, I decided to start the installation process selecting the app shortcut on desktop:

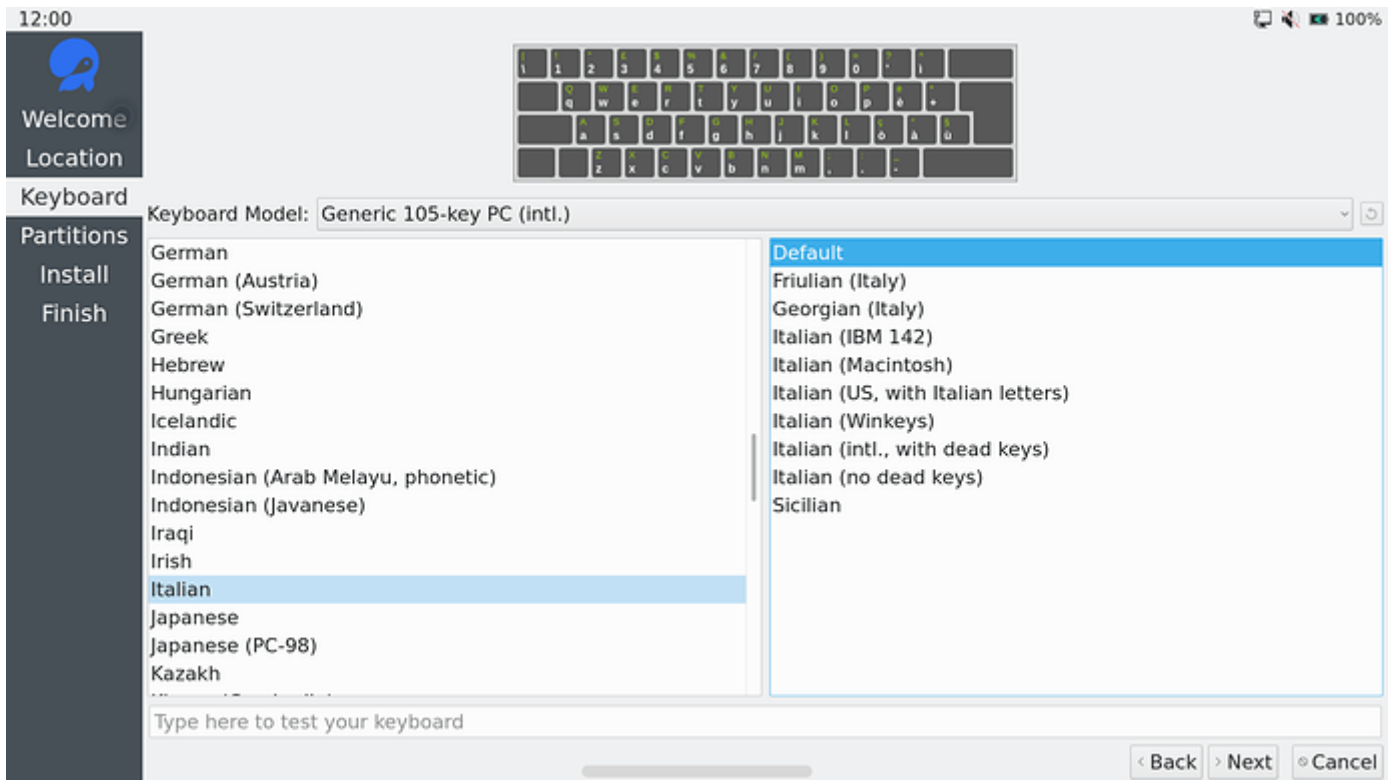

6 Install process 1920×1080 106 KB

First of all you have to select your language (I selected English cause Italian is not so common here... 🇮🇹)

7 Language 1920×1080 159 KB

Select the right keyboard, various input methods are available:

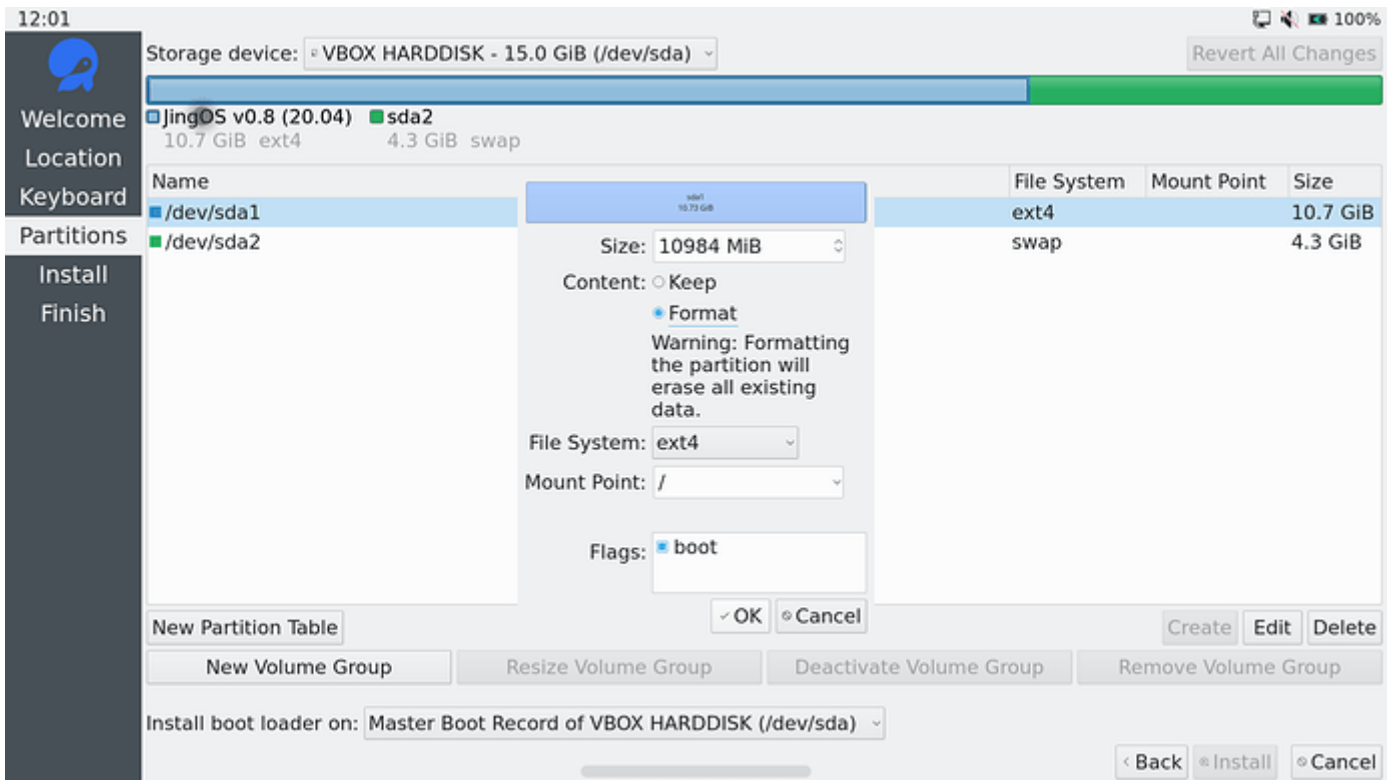

8 Keyboard 1920×1080 164 KB

And now the user has to choose how to proceed:

9 Install method 1920×1080 124 KB

You can decide to manually partition it:

10 Manual partitioning 1920×1080 185 KB

So the installation starts:

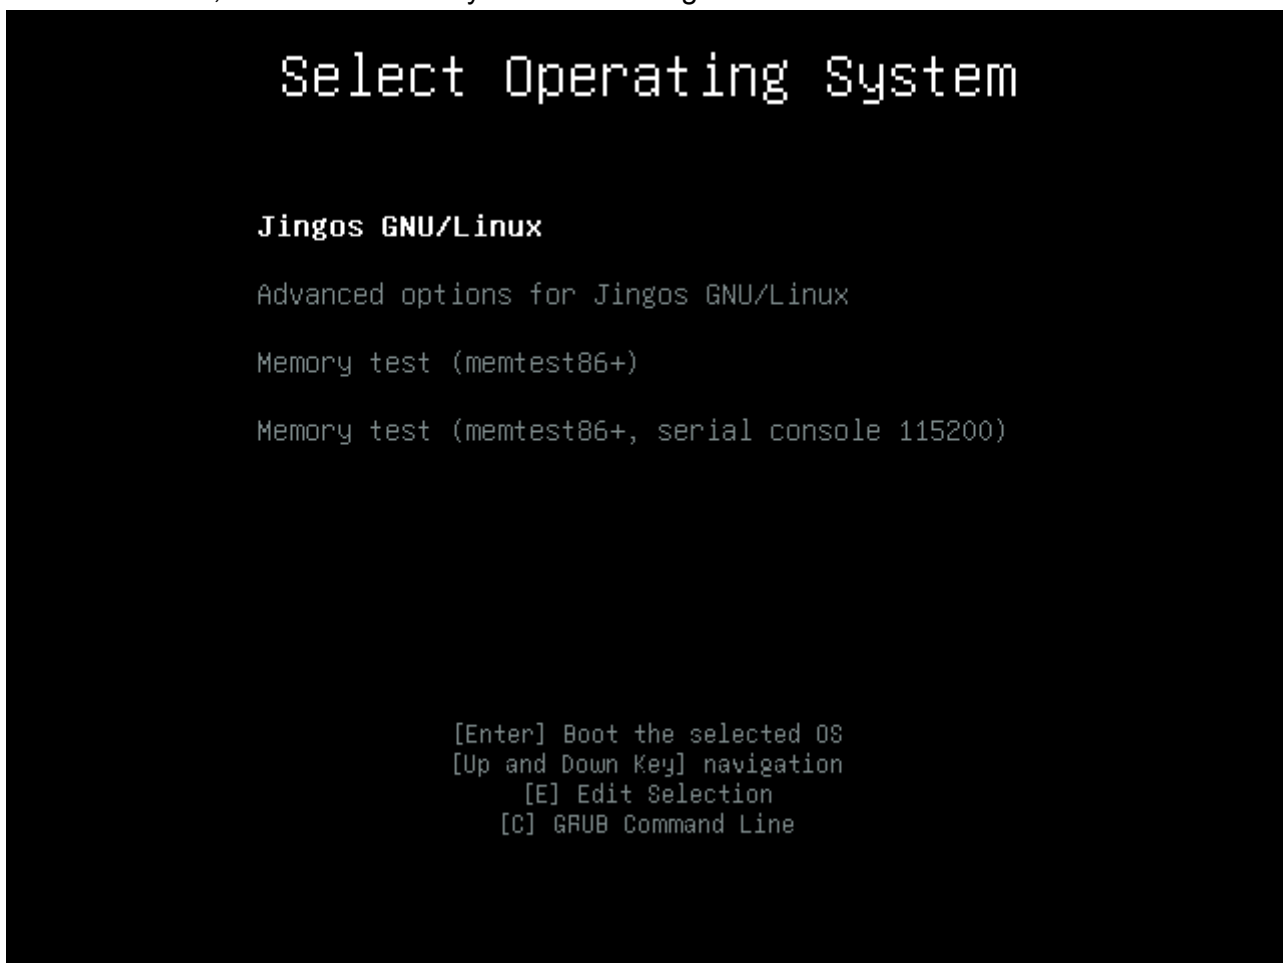

11 Installation ongoing 1920×1080 151 KB

After some minutes, you can conclude the installation process:

12 Installation concluded 1920×1080 75.7 KB

After the reboot, the GRUB allows you to select JingOS:

Again, another wizard appears:

Discover

12:12 PM

Security updates available

Hello JingOS

Starting now

14 First boot 1920×1080 65.3 KB

User has to define password:

Set Password

Please enter the password again

1

2

3

4

5

6

7

8

9

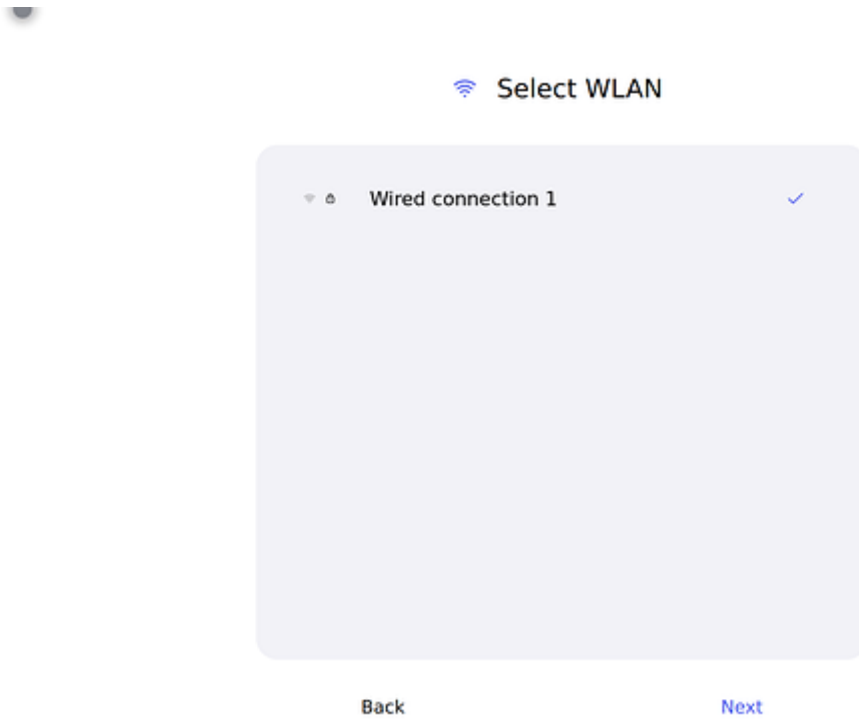

0

Skip

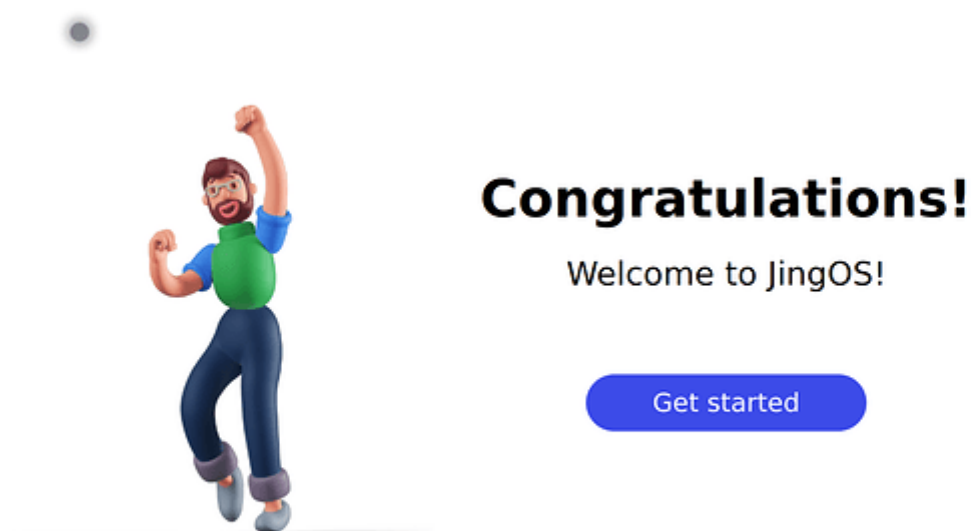

15 Password 1920×1080 49.6 KB

Again select the connection method:

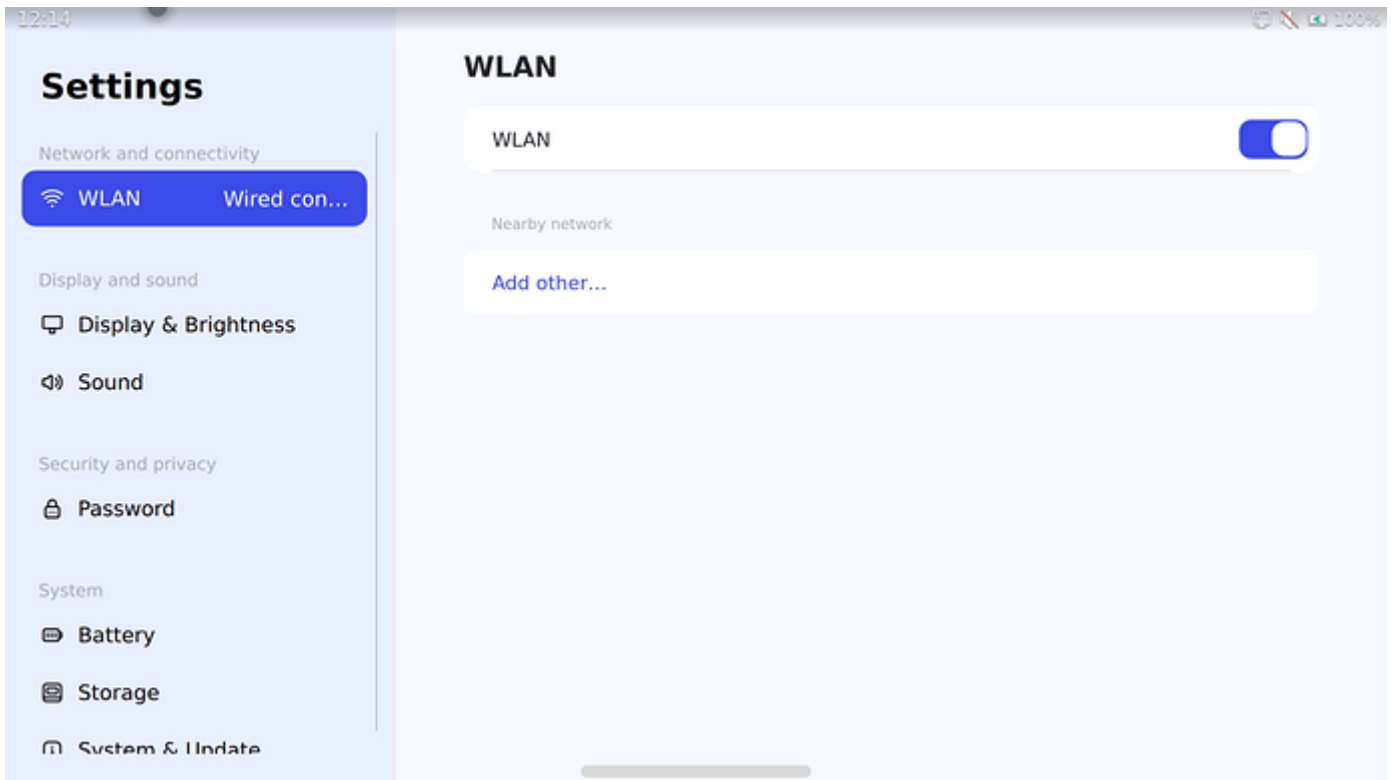

16 Connection1920×1080 28.9 KB

Finally, the user concluded the installation process and first boot:

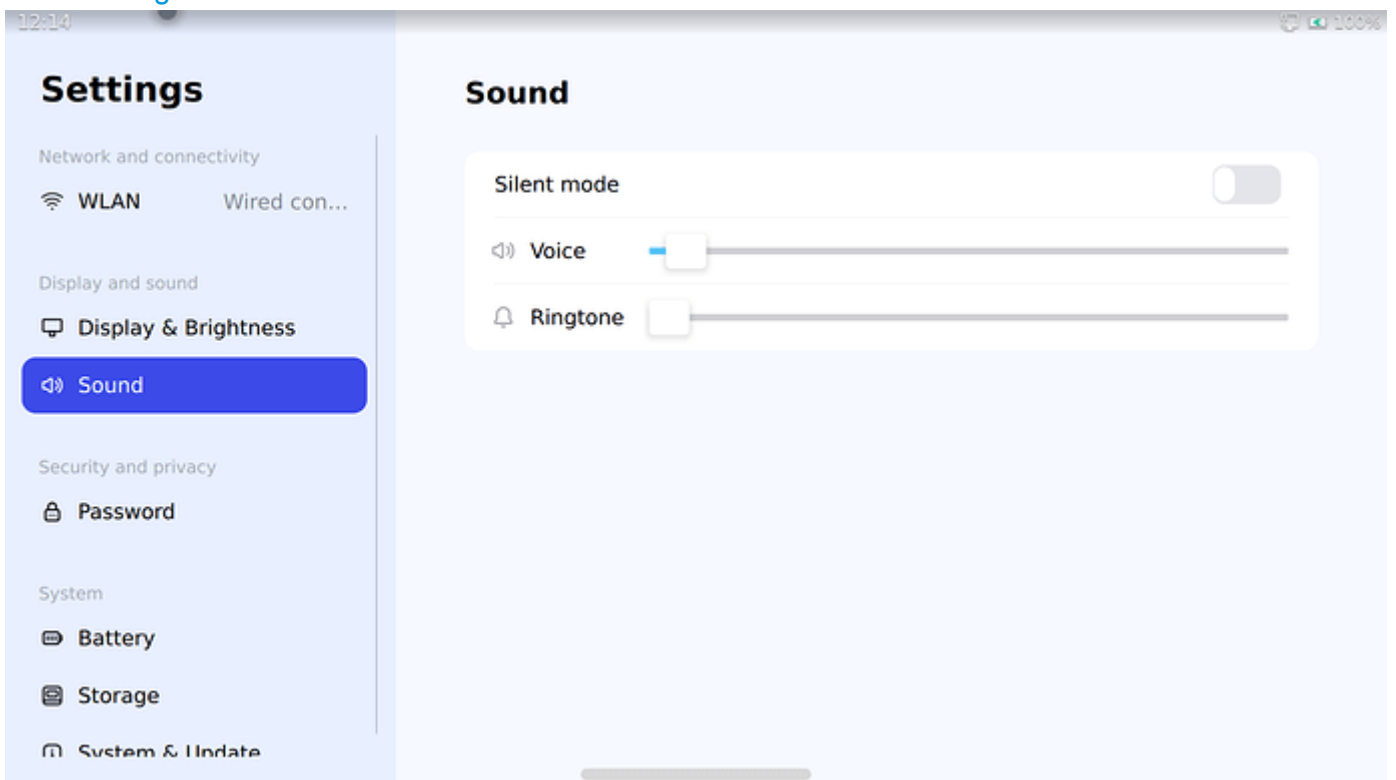

17 Finish1920×1080 132 KB

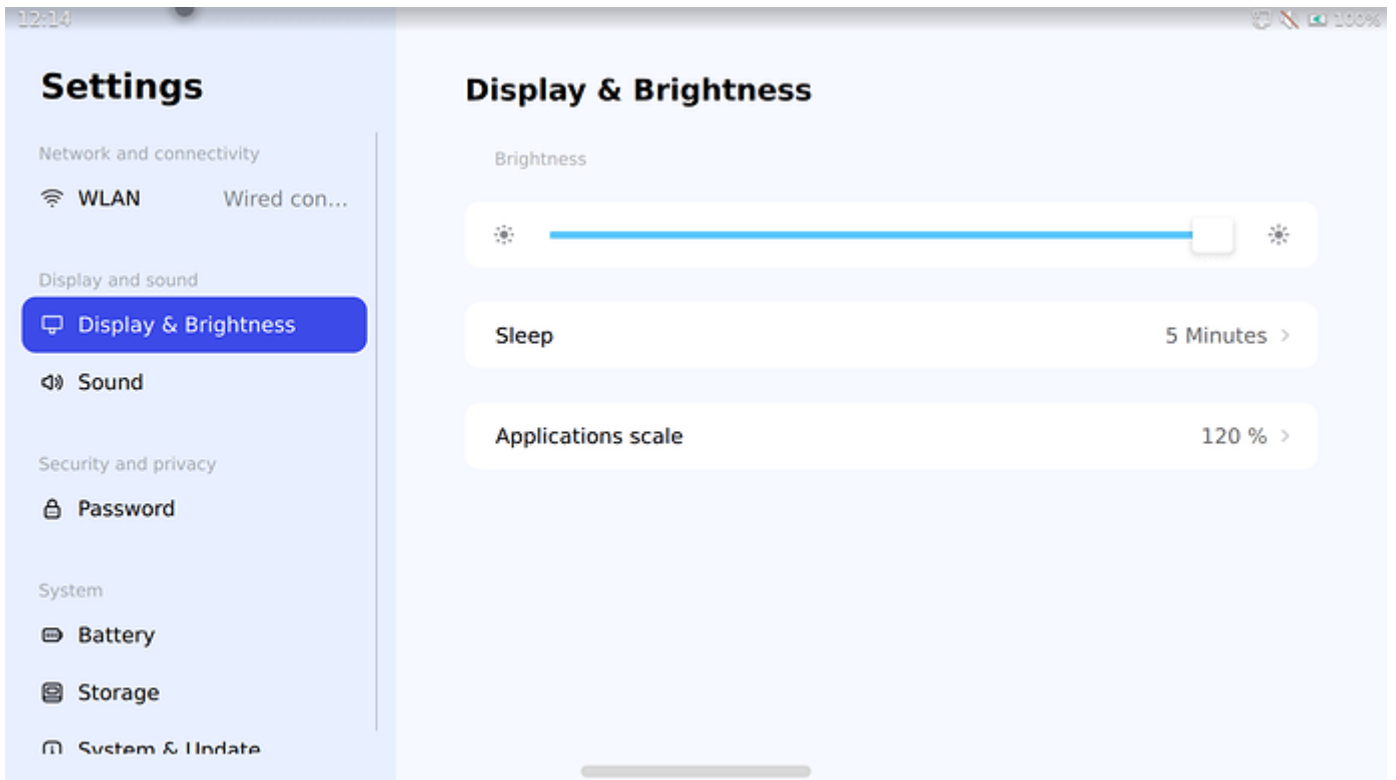

After installation, users could open settings:

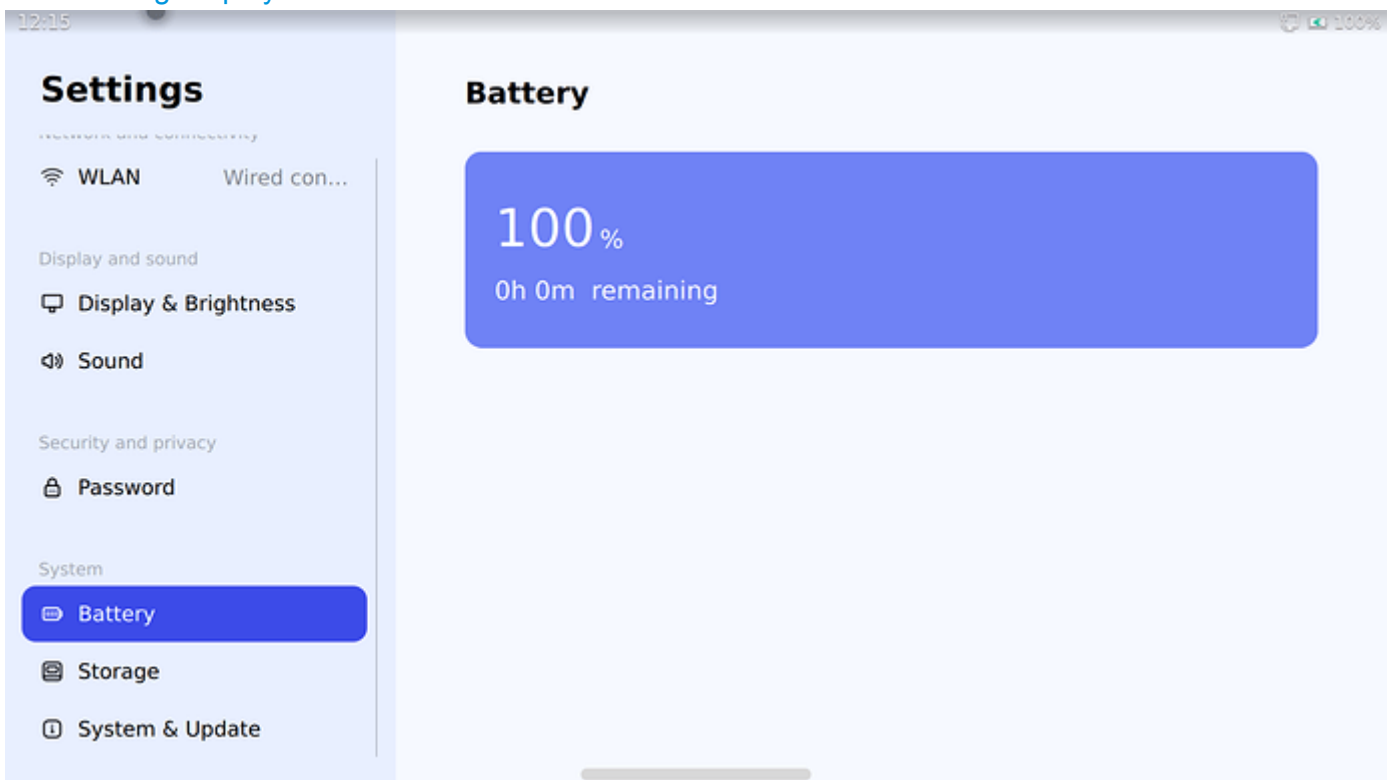

18 Setting Connection1920×1080 100 KB

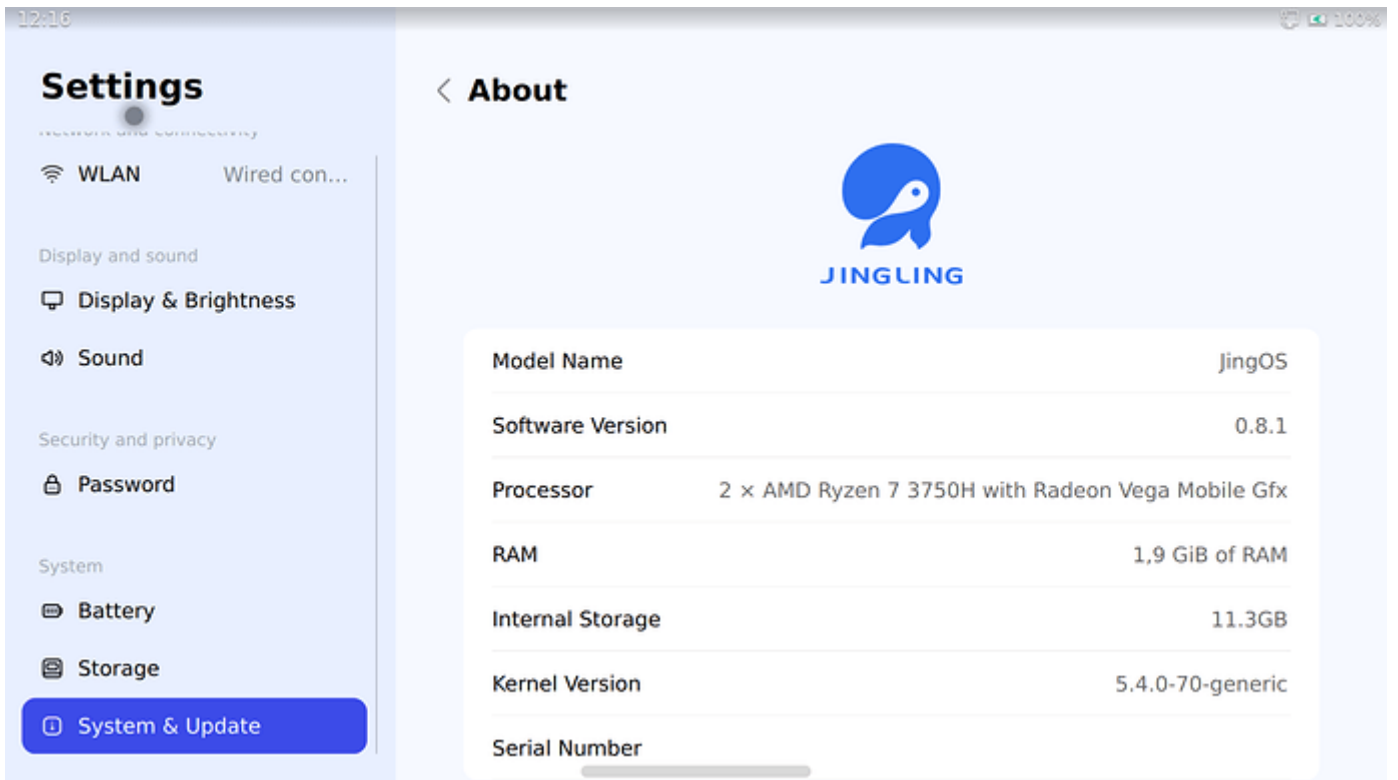

18 Setting Sound1920×1080 108 KB

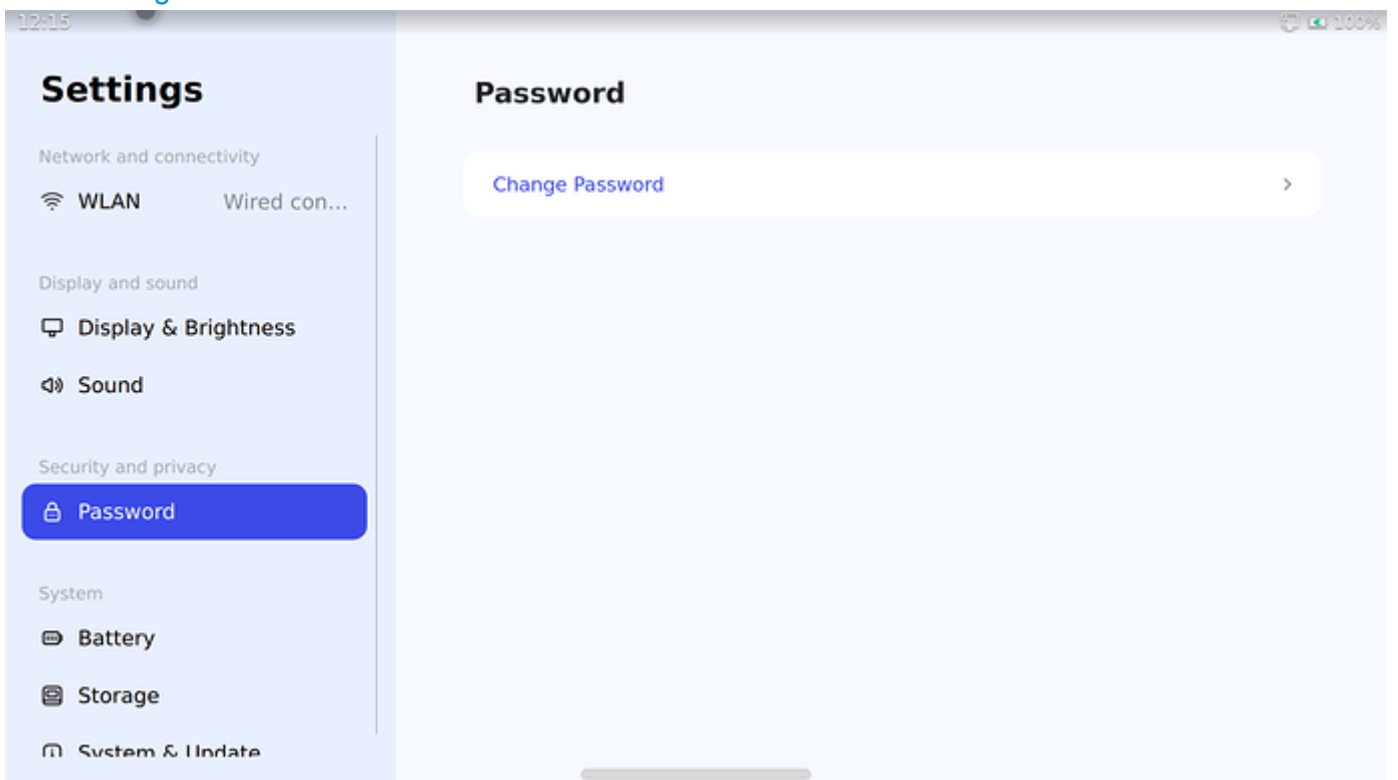

19 Setting Display1920×1080 125 KB

20 Setting Battery1920×1080 103 KB

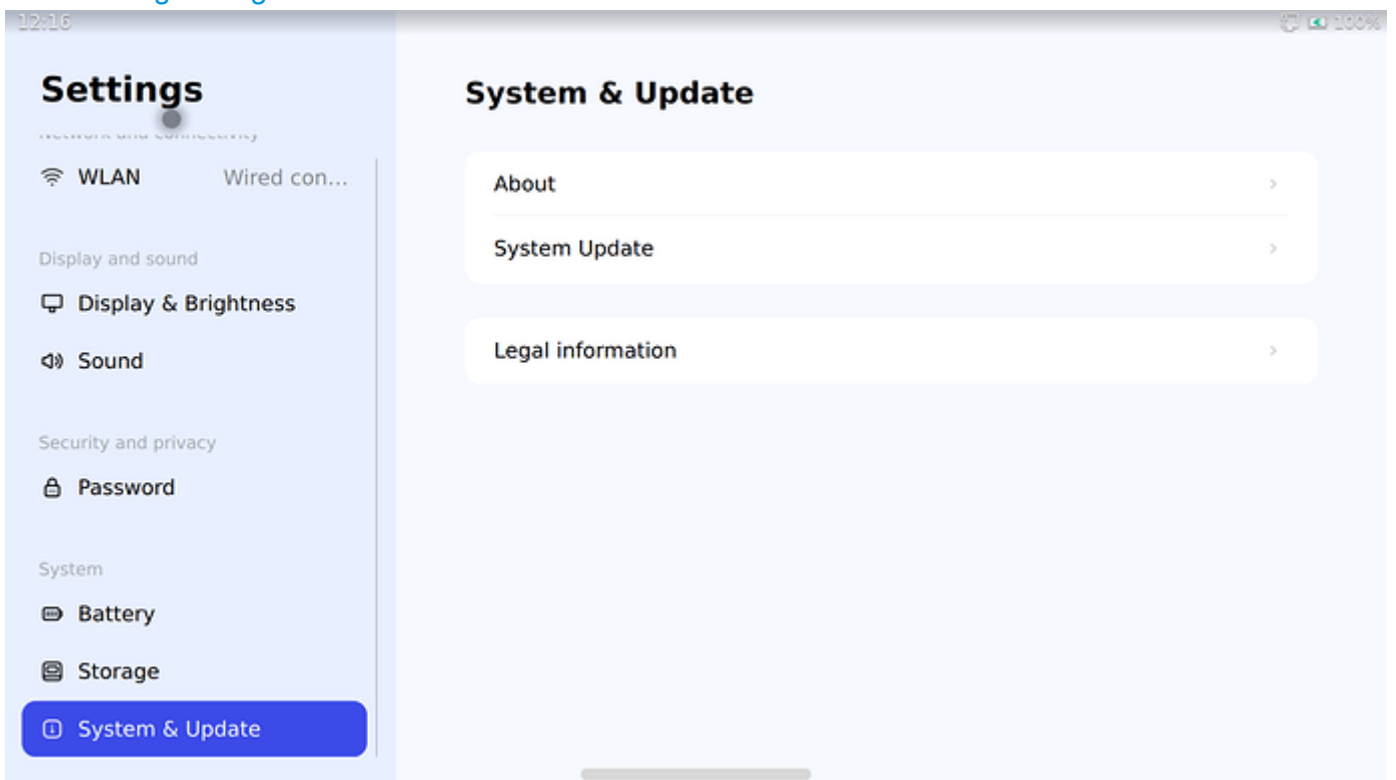

20 Setting Info1920×1080 172 KB

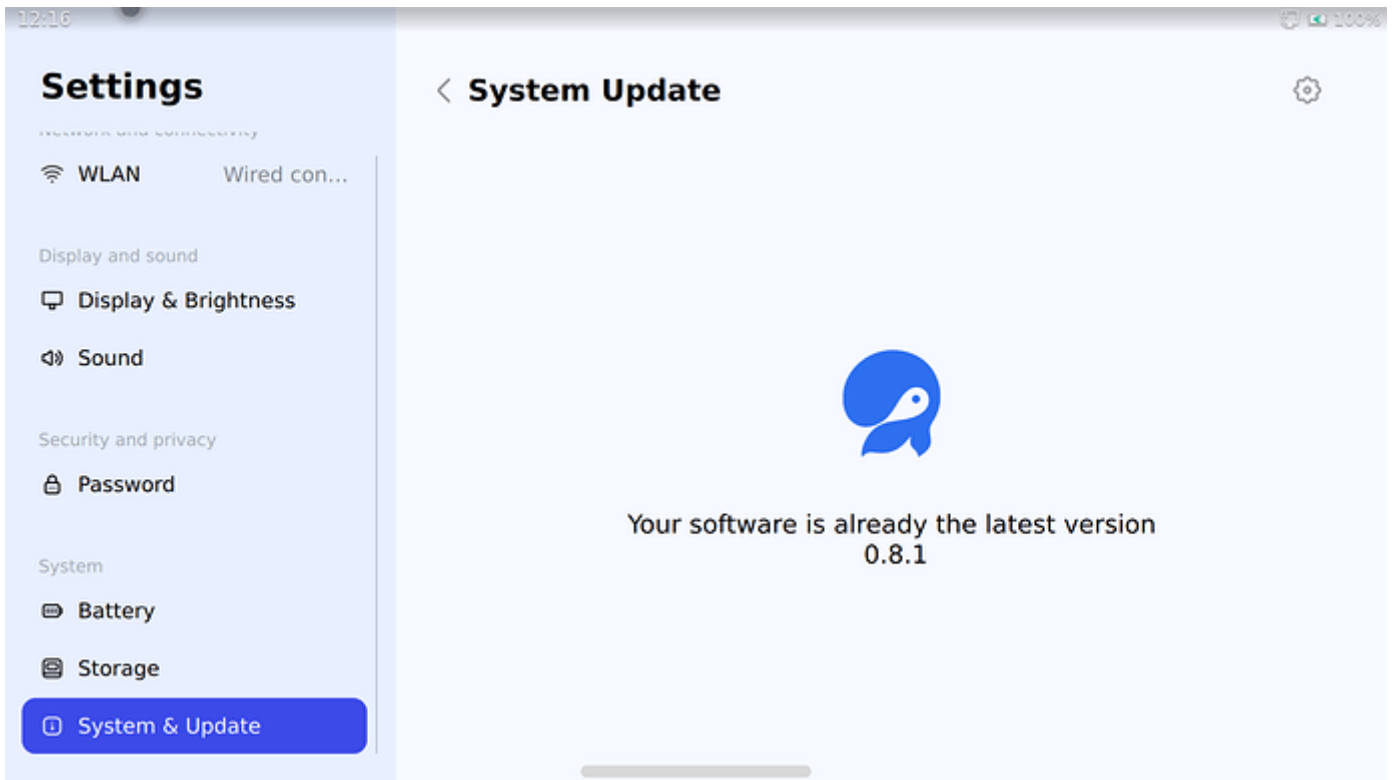

20 Setting Password1920×1080 96.9 KB

20 Setting Storage 1920×1080 105 KB

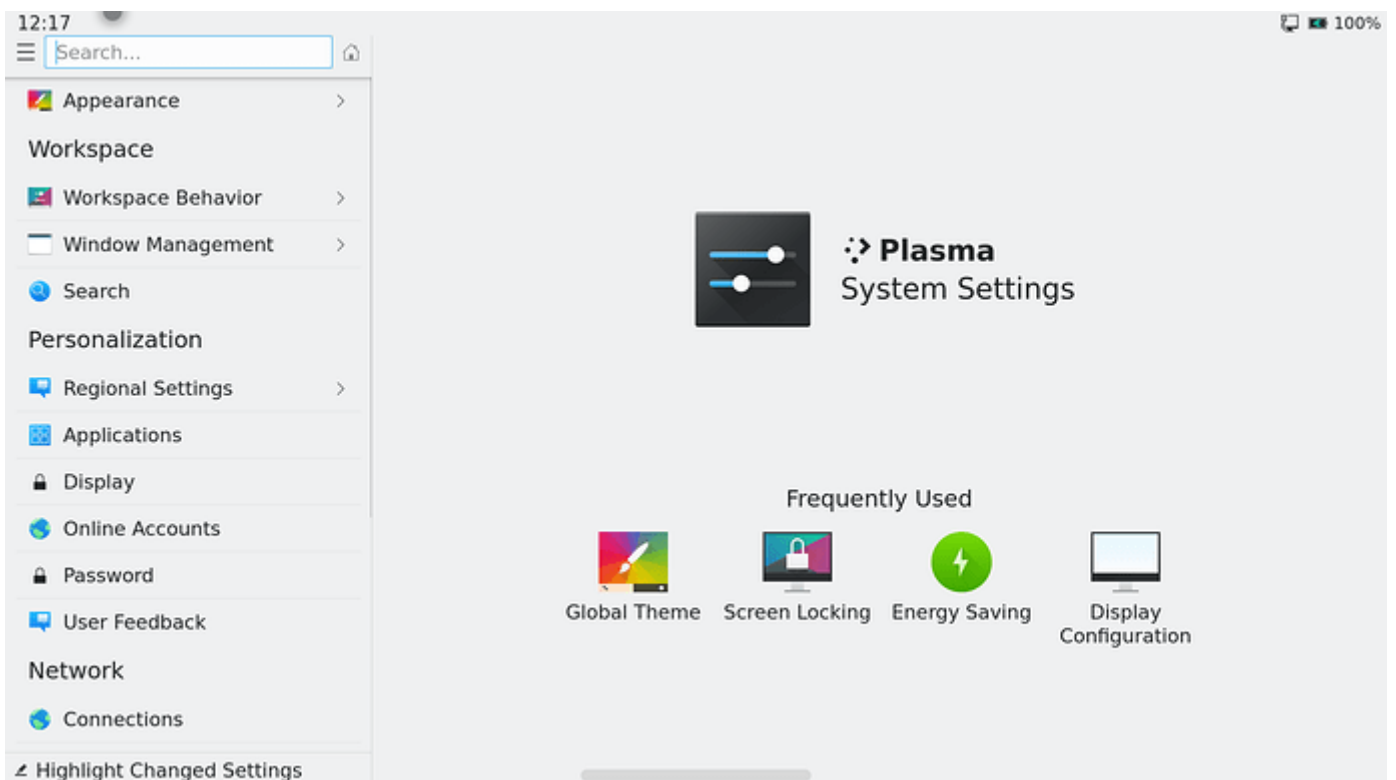

20 Setting System 1920×1080 114 KB

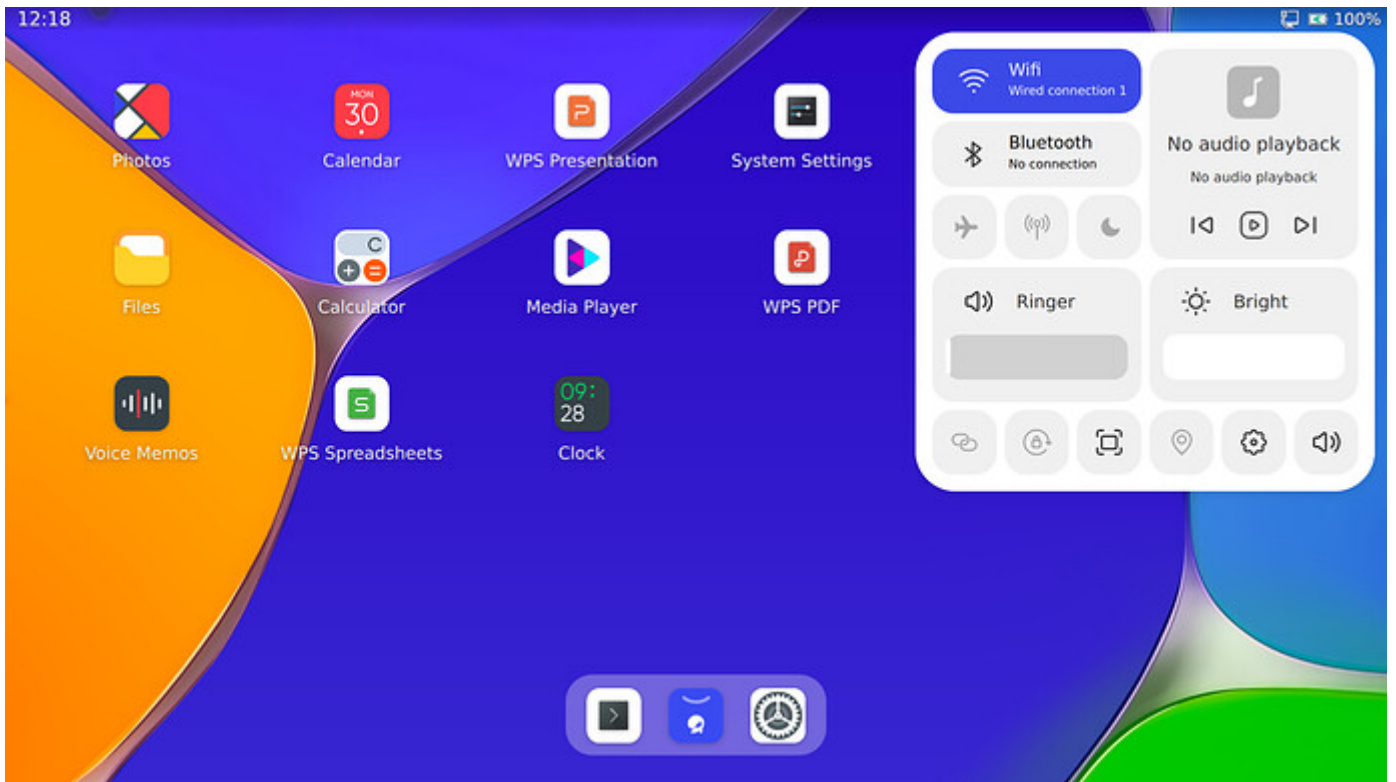

20 Setting Upgrade 1920×1080 125 KB

I discovered also the Plasma setting tool:

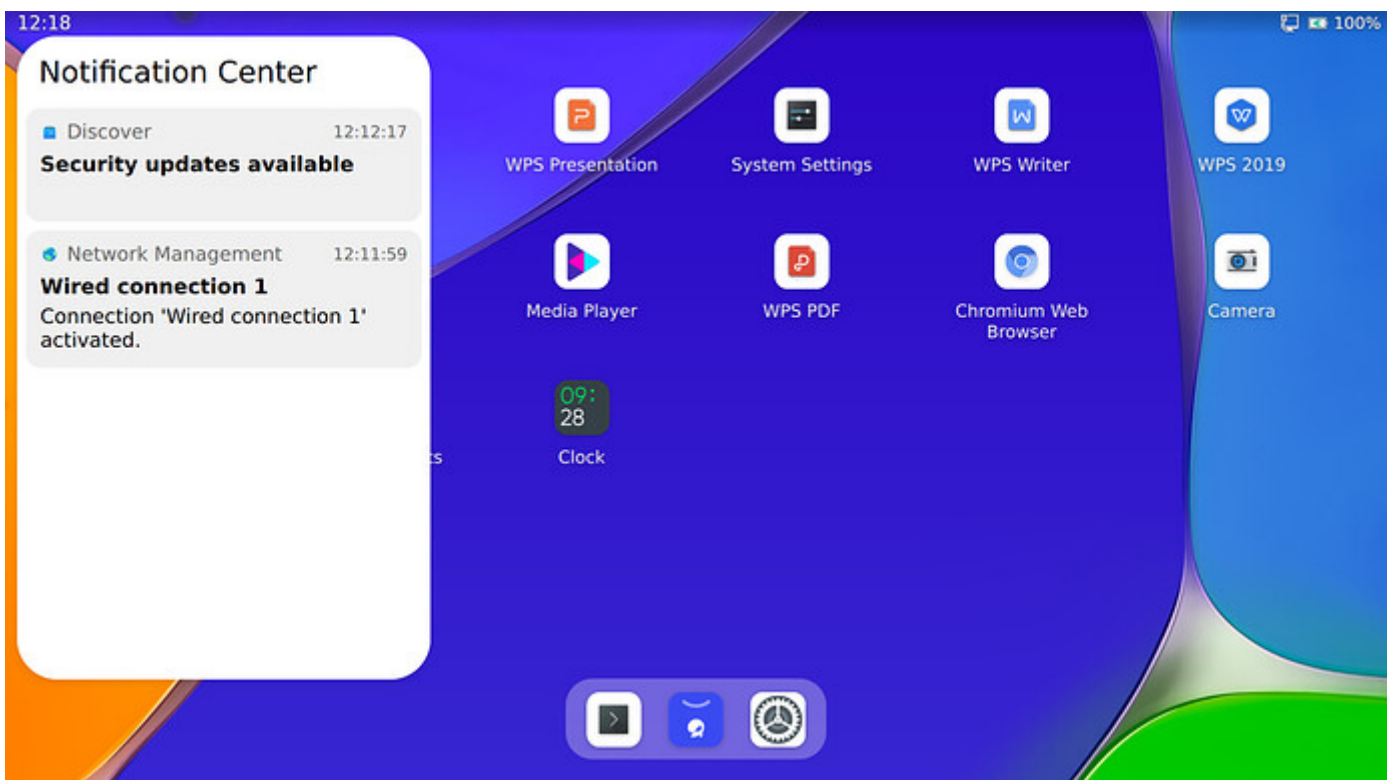

21 Plasma System Setting 1920×1080 149 KB

Control center:

22 Control Center 1920×1080 230 KB

Notification center:

23 Notifications 1920×1080 225 KB

So, what do you think about the JingOS work in progress development?

Do you have any suggestion about it?

Have a nice day!

List of feedback received:

@Urnyx05 suggest to increase padding around the text “Notification Center” and change Battery Icon.
